*Introduction*

I am an AI researcher with a strong background in working with real-world data and developing models aimed at practical applications. I am eager to contribute my skills to a dynamic team dedicated to solving cutting-edge challenges.

*Work Experiences*

**Research Engineer** Mar 2022 – Present
*Seoul National University Hospital* *Seoul, Korea*

- **Data Analytics and AI Research**
  - Conducted research on AI-driven solutions with a focus on developing prognostic models to improve patient outcomes.
  - Collaborated with clinical teams to design and implement AI models.
- **Database Management and Infrastructure Development**
  - Built and managed a database of urology, ensuring data integrity and regulations.
  - Developed a web-based dashboard for real-time data visualization and clinical research.

*Education*

**Seoul National University** Mar 2022 – Feb 2024
*M.S in Interdisciplinary Program in Bio-engineering (Advisor: Prof. C.W. Jeong)* *Seoul, Korea*

**Inha University** Mar 2015 – Feb 2022
*B.S in Mechanical Engineering and Software Engineering* *Incheon, Korea*

*Research Interests*

- **Multi-modality:** Large language and vision models (LLaVA), CLIP
- **Cost-effective learning:** Self-supervised learning, Domain adaptation

*Publications*

*Projects*

- **Multi-modal survival scoring system of clear cell renal cell carcinoma**
  - Developed a multi-modal survival prediction model for kidney cancer patients on clinical information and pathology images. The model integrates clinical and pathology data using self-attention mechanisms to enhance prognostic accuracy, suggesting the possibility of personalized treatment.

- **Surgical video understanding via large language and vision assistant**
  - Constructed instruction-following data for surgical VQA captions using GPT-3.5, and fine-tuned a vision-language model based on LLaVA to specialize in surgical image understanding.

- **Self-supervised domain adaptation in 6DoF pose estimation**
  - Applied contrastive learning and adversarial training to bridge the domain gap between real and synthetic environments, improving 6DoF pose estimation for robotic arm object grasping.

- **Predicting postoperative hypoxia through Spirometry signals**
  - Developed a CNN model that processes airway pressure and lung volume signals, as captured in operating room monitors, to analyze morphological features in surgical patients. Extracted significant morphological features using Grad-CAM and proposed a novel PHP index based on these insights.

- **Data responsive dashboard website development**
  - Developed and deployed a responsive dashboard website to visualize data collection and distribution processes, enhancing user accessibility and data transparency.
  - Tech stack: Client (javascript, streamlit), Server (Django, AWS), Database (SQLite, MariaDB)

*Patents*

"Method and apparatus for self-supervised 6D object pose estimation", Y. G. Kim, E. J. Jeong, **J. S. Jin**, J. H. Park, J. M. Cho, US Patent, 2024.04.25, US 18491051

"Real-time hypoxemia prediction system using spirometry signal during surgery", H. S. Kim, Y. G. Kim, Y. M. Shin, Y. J. Kim, **J. S. Jin**, S. B. Lee, KR Patent, 2023.03.03, KR 10-2023-0028285

*Skills*

**Scientific Skills**

**Advanced:** Deep learning / Multi-modal
**Bacic:** Statistics / Linear algebra

**Computer skills**

**Advanced:** Python (pytorch) / Linux / Docker
**Bacic:** Client (Javascript / Streamlit) / Server (Django / AWS) / DB (SQLite / MariaDB)
