Introduction

I'm Juseong Jin, an AI Research Engineer. With a broad background in AI research and data engineering, I'm passionate about applying technology to solve real-world problems. I am driven by the goal of creating innovative value through data and am eager to contribute to innovation.

Research Interests

- **Multi-modality AI:** Vision-Language model, Contrastive learning
- **AI agent:** Multi-Agent system, RAG for long term memory

Engineering Skill Sets

- **AI Tools:** Pytorch, Langchain, LM studio
- **Data Engineering:** Python, Airflow, SQL
- **MLOps:** Docker, FastAPI, MLflow, GCP, Github actions

Work Experiences

Research Engineer

Mar 2024 – Present

Seoul National University Hospital

Seoul, Korea

- **AI Research**
 - Researched medical AI models (domain-specific VLM, multi-agent system, Graph RAG).
 - Utilized Docker and MLflow for model development and experiment tracking.
- **Data Engineering**
 - Designed integration APIs and built Airflow-based ETL pipelines for clinical data flow.
 - Applied QC logic and automated outlier detection to maintain data integrity.

Education

Seoul National University

Mar 2022 – Feb 2024

M.S in Interdisciplinary Program in Bio-engineering (Advisor: Prof. C.W. Jeong)

Seoul, Korea

Inha University

Mar 2015 – Feb 2022

B.S in Mechanical Engineering and Software Engineering

Incheon, Korea

Projects

- **MedARC: Medical Agents Reasoning via Reinforcement Collaboration**
 - Developed a self-organizing multi-agent framework to enhance reasoning in medical vision-language models.
 - Applied proximal policy optimization to dynamically optimize multi-agent collaboration.

- **Surgical scenario understanding via large language and vision assistant**
 - Fine-tuned LLaVA on GPT-3.5-generated instruction data for surgical VQA and reasoning tasks.
 - Utilized contrastive learning to align visual and temporal features from surgical images and videos.
 - Achieved +4% VQA and +14% video reasoning accuracy, setting new SOTA in the domain.
- **Urology Data Mart Construction**
 - Designed APIs and built Airflow-based ETL pipelines for automated data collection and preprocessing.
 - Implemented quality control and outlier detection logic to ensure data reliability.
 - Developed an MVP dashboard for monitoring key clinical and operational metrics.
- **Multi-modal survival scoring system of clear cell renal cell carcinoma**
 - Developed a personalized survival prediction model integrating clinical data and pathology images.
 - Improved risk ranking performance using attention-based MIL and margin ranking loss (+4%p C-index, +7%p IBS).
- **Self-supervised domain adaptation in 6DoF pose estimation**
 - Built a vision module for robotic grasping with ETRI using synthetic data to overcome annotation scarcity.
 - Applied contrastive and adversarial learning for self-supervised domain adaptation.
 - Boosted ADD-S score by +16%, achieving SOTA among self-supervised 6DoF methods.
